Food safety, quality control and complete traceability is of paramount importance to fulfill consumers’ requirements.

Dinamica Generale is constantly improving precision farming and precision feeding solutions that generates effective results along the entire value chain.

The intelligence of the system is a cloud database that integrates farm-specific data sources, while the big data analytics delivers recipes and prescription maps to improve animal health and soil treatment effectiveness to increase consumer confidence in what they eat.
VALUE-ADDED SOLUTIONS FOR DAIRY AND BEEF FARMS THAT MAXIMISE PRODUCTION AND REVENUE

Comprehensive technologies:

- Weighing and Automation (weight indicators – load cells and sensors – accessories)
- On-Farm Analysis (NIR, optical & imaging technologies)
- Data Management (Software and data exchange tools)
Consistent and predictable feed quality is top of mind for today’s dairy and beef farmers. The project we called myfeed360 is aimed at providing farmers with the most advanced technology for monitoring, measuring and ensuring the quality of feed within each phase of animal nutrition process. Here is what we manage:

- Input feed ration into the Feed Management Software and track feed costs
- Apply real time adjustment of each loaded ingredient based on dry matter and nutrients
- Control TMR homogeneity and fiber lengths during mixing process in the TMR mixer
- Measure the real quantity of feed distributed to each pen
- Track milk production based on real dry matter intake
- Control farm performance in real time from any location
- Share feeding information online with nutritionists to improve the process efficiency

**myFeed360**

**DISTRIBUTION**

- Feed Distribution Control

**Tracking**

- Input Feed Ration

**NIR Scanner**

- Real-time weight adjustment

TOTALLY INTEGRATED SOLUTIONS
1.1 Weight indicators for feed mixers

The right indicator for any requirement

The wide range of weight indicators offers integrated functionality and different options based on performance required.

What can you benefit?

• Scalable, flexible range designed for any feeding applications requirement (trailed or self-propelled feed mixer, stationary feed mixer, automatic feeding system etc...)
• Balanced price-performance ratio
• Minimization of downtimes thanks to integrated monitoring and diagnostics
• Multi-language user interface (all EU languages, Chinese, Russian, etc...)
• IP 68 protection for all weight indicators

Load Cells & Sensors

Load cells and sensors that convert a force into an electric signal, are used in a wide variety of force and weight monitoring applications.

Dinamica Generale offers many load cell types, such as mobile, spindle, pin, flat, compression, strain sensors, pressure transducers, shear beam units. Choose from multiple configurations and sizes, but never compromise on precision and reliability, which are standard in each load cell manufactured by Dinamica Generale.

We have been producing load cells since the nineties to meet customer requirements over time. Even though we have an extensive product offering, if you cannot find just what you are looking for, we will work with you to develop a new product to suit your needs. Choose Dinamica Generale load cells for all your force-sensing needs.
Model

Mobile

Features
- High-quality alloy steel: dinamica generale special thermal treatment makes it stable for years
- PTE cables: maximum protection against moisture, flame and temperature (operating temperature -50° C - 70° C)
- High resistant coating (480h salt spray testing)
- Aluminum protection: strain gauge protected against impact (mobile models)
- Sealed strain gauges: sealing agent and industrial grade potting compound protect against harsh use in agricultural field
- Temperature compensation as option
- Custom mechanical design available on request
- IP68 Protection rate

Benefits
- Full traceability of each sensor
- Factory standard pre-calibration and testing procedure
- Highly Accuracy
- Wide range available

### Cab Display

Small size display, to be preferably used in the cabin of the tractor or WIRELESS connected on each loading machine.

### Extra Display

LED Display to control weight and ingredients even from long distance (over 30 m - 100 feet). High performance display even in direct sunlight.

### Weight Repeater

High efficiency LED display to be visible in any lighting conditions. Clear and comfortable viewing of weight information from any position. Lower energy consumption. Shorter set-up time and easy connection to the weight indicator.
**EASY CONTROL 2 WiNET™**
Remote control to manage the indicator from up to 25 m (82 feet). With the WiNET™ Modem Interface, the remote control can be used with all Dinamica Generale wireless accessories without any interference: all devices communicate within the same network.

<table>

**Distribution Tracking**
With the aim of improving the efficiency and control of animal feed rations, Dinamica Generale is promoting an electronic device which marks out the material to be discharged in front of each pen through tag system technology that tracks the feed distributed. (Distribution tracking is available only for DG8000-IC weight indicator)

**Benefits**
- Track delivered TMR for each pen and keep distribution under control
- Operator accuracy monitoring for continuous process improvement
- Delivering the right quantity of TMR means decreasing feed refusal thus reducing feeding costs.
**Weight Transmitter DG-WT**

The Weight Transmitter DG-WT is a digital-analog weight transmitter specifically designed for Dinamica Generale weight indicators. Particularly suited for biogas applications, DG-WT can be used in different applications from simple weighing to mixing and filling stations, in conjunction with PLCs, computers or other supervisory systems.

**Motor Control box**

The Motor Control Box is the one-stop solution to control animal feed automation plants.

With the Motor Control Box, driving functions like open the doors, start belts and control material discharge from silos to name but a few, become easier and quicker.

1) AUTOMATIC LOADING PROCESS
The system is designed to control and automatically manage ingredients stocked in silos to get the best possible TMR quality

2) AUTOMATIC DISTRIBUTION PROCESS
The Motor Control Box sets the control of the TMR distribution from the feed mixer right in front of cows. Thanks to the DTM Feeding Management Software, programs can be set directly from the office.

Turn feed costs into revenue with feedelio systems

Feedelio is the precision feeding system designed for farmers to control all stages of animal nutrition process from recipe preparation, data transmission up to distribution of feed rations. The Feedelio System manages all data collected daily within the feed process and turns them into useful information to increase efficiency and farm performance.

Feedelio consists of DTM – Daily TMR Manager, the comprehensive feed management software in the Cloud designed to optimize daily feed process, a programmable weight indicator, a 3G modem for data exchange and the DTM app to monitor the key performance of your farm. The system can be equipped with the NIR scanner (for both self-propelled and trailed feed mixer) which enables to enhance even further the quality control of animal nutrition.

The Feedelio system enables:
- planning precise ration per head
- creating batches with high flexibility
- complete operations traceability
- reducing feed refusal
- providing real-time information on dry matter intake
- interfacing with main third party herd management software.

### FEEDDELIO 8000 Professional CLOUD

**Description**

Precision feeding system developed to manage large farms

**Kit composition**

- DG8000 indicator
- DTM Daily TMR Manager Software (Cloud Professional Version)
- GPRS modem for reliable data transfer
- DTM App

**Benefits**

- Management of refusals
- Specific features for contractor applications
- Operator’s control through specific login
- Fully integrated with NIR analysis systems

### FEEDDELIO IC CLOUD

**Description**

The most efficient and innovative precision feeding system developed for structured and demanding farms

**Kit composition**

- DG8000-IC indicator
- DTM Daily TMR Manager Software (Cloud IC Version)
- GPRS modem for reliable data transfer
- DTM App

**Benefits**

- Management of refusals
- Fully integrated with NIR analysis systems
- Premix management and traceability
- Optimum feeding control for maximum beef and dairy production
Wireless Scale Indicator

**SMART Control**

Completely Portable Scale - in the tractor - in the field - on the farm

More than a Portable Scale. Smart Control is the one-stop portable wireless solution for hydraulic and weighing functions. The device can be customized as weighing device only, hydraulic or integrating weighing and hydraulic functions together.

The hydraulic functions are highly customizable managing up to 24 solenoid valves with internal sound alarm and color display for high visibility. Open/Close discharge doors, activation of belt conveyors are just a few functions that Smart Control is capable of controlling.

Furthermore, all functions controlled by the Smart Control can be easily programmed thanks to the Smart i-Con software, a specific cloud tool designed for configuring your device to suit your needs.

---

**Benefits**

- Save time and fuel during loading and unloading by controlling the hydraulic functions
- Highly customizable solution in terms of functions and graphic design to fit every customer’s needs
- All scale weighing functionality - in the palm of your hand
- All hydraulic functionality - at the touch of your fingertips
2. On-Farm Analysis

2.1 NIR Technology
   2.1.1 Portable NIR Analyzers
   2.1.2 On Board NIR Analyzers for Feed Mixers

2.2 Imaging Technology
   2.2.1 TMR Mixing quality Control
ACCURATE
Improving Feed Management to the next level

Feed cost is one of the largest expenses on dairy farms. In addition to being a major cost, an improperly balanced diet can affect cow health, decrease milk production, and result in negative environmental impacts. Regular dry matter (DM) testing of feeds and rebalancing the ration to compensate for DM changes ensures that dairy producers are feeding the ration formulated by their nutritionist.

Near Infrared (NIR) Analysis
NIR measures the light (in the near-infrared spectrum) reflected off from a sample when analyzed. NIR is faster and lower cost than using traditional wet chemistry methods to determine the nutritional composition and DM of feeds. Dinamica Generale developed NIR technology systems for feed mixers and portable devices since year 2000. Farm managers and nutritionists using Dinamica Generale NIR tools can now make management decisions regarding the feed in real time.

Why use NIR Technology?

- Decrease waste and save money
- Decrease variability (day-to-day) in total ration via traditional sampling protocols
- Minimize errors for increasing precision
  (maximum sampling = minimum errors)

NIR on-farm advantages
- Fast – can conduct a reading in :30 to :60 seconds
- Works on ground or un-ground feedstuffs
- No chemical waste
- Can analyze main components in one reading
- No changes in samples
- Low per-analysis cost
- Mobility of NIR analyzer

The bottom line
Real-time NIR measurement of feed samples while formulating the ration means getting closer to the recommended diet, maximizing production efficiency and reducing costs.
AgriNIR
Your own lab on-the-go

Portable NIR Analyzer for Forages and Grains
Dinamica Generale introduced the AgriNIR back in 2008. AgriNIR is the nutritionist’s toolbox for feed sampling, testing and ration adjustment in real time. Dairy farmers need quick and accurate recommendations. The more time it takes for a response, the more impact it can have on milk production and the bottom line.
AgriNIR is tried and tested portable NIR analyzer for forages and grains that measures the percentage of moisture (dry matter), crude protein, starch, ADF, NDF and ash in seconds.

• 7 ingredients as standard on each analyzer
• Connects to computer via USB port and wi-fi
• Print out reports right after the analysis thanks to the built-in printer.

Feed is the most important and expensive input in any dairy operation. Minimizing variability and delivering the optimal ration to maximize production has great impact on profitability.
Bring AgriNIR into the equation and help your clients get the most out of their feed every day.

Benefits
• **Reliable.** The highest possible accuracy on-site.
• **Robust.** Sturdy case, full-portability, minimum maintenance
• **Versatile.** Determine the right time to harvest. Check quality of feed purchased. Control feed inventory.
• **Profitable.** Value for money
• **Quick and easy to use.** NIR analysis in seconds!
X-NIR
Daily handheld analysis for everyone

X-NIR Portable NIR Analyzer for Anywhere, Anytime Feed Analysis. By taking NIR technology into the production facility in the form of a portable, handheld unit, feed manufacturers and farmers can obtain real-time results while reducing costs from third-party testing.

X-NIR can increase these capabilities by taking lab-proven technology off the bench and making it usable by non-scientists. Results that are available within minutes in the manufacturing facility are more actionable, enabling decisions that can increase the profitability of the farm.

- 3 ingredients as standard on each analyzer to pick from more than 60 ingredients available
- Connects to computer via USB port and wi-fi
- 4”3 Touch screen interface let you access all functions with a simple fingertip.

Feed is the most important and expensive input in any dairy operation. Minimizing variability and delivering the optimal ration to maximize production has great impact on profitability.

2.1.2 On Board NIR Analyzers for feed Mixers

**FEED Scan**
NIR analyzer for feed mixers and front loader
The Next Generation in Feeding Management

Using patented NIR (near-infrared) technology and defined calibration curves based on your feedstuffs, the system measures the dry matter content, crude protein, NDF, ADF, ash, fat, and starch and other nutrients in every ration. Combined with the power of DTM (Daily TMR Manager) feeding software, producers across the dairy belt using the FEEDScan are experiencing new levels of precision feeding, commodity management, cow performance and profitability.

There simply is no other feed management system on the market like it!

The system gives farmers complete control over their ration components. Utilizing NIR technology, farmers can automatically adjust every TMR batch for Dry Matter in real time and easily modify nutrient variations to match nutritionist recommendations.

Other feed management and weighing systems help farmers keep track of their ration formulas, refusals and costs over time – but they do not allow them to make adjustments in real time with every mixer load. The FEEDScan combined with Dinamica Generale precision feeding systems gives farmers the total package of tools they need to feed a precise ration on every feedout. This helps farmers become more proactive, more consistent and better managers.

**Benefits**

- Never wait for moisture tests or lab results.
- Never second-guess over- or under-feeding your animals.
- Have greater control over weather events.

**By measuring Dry Matter and other nutrient content in real time, farmers can:**

- Decrease expensive ingredients in the ration
- Improve feed efficiency with stable feeding and minimized refusals
- Improved herd health
- Be financially rewarded by cutting costs and boosting production of milk, butterfat and protein and weight gains

**Precision Feeding system with NIR analyzer Payback**

On average, farmers have seen payback from their system in as little as six months.
NIR analyzer for self-propelled feed mixer

NIR analyzer for front loader

NIR analyzer for feed mixers’ tank
Benefits

- The VISIOMIX system can be mounted on every feed mixer on the market.
- Controlling homogeneity and length of fibers is of paramount importance to improve rumination, sorting activity, production yield and animal health.
- VISIOMIX in association with Precision Feeding systems provided by Dinamica Generale offers the opportunity to extend the control of feeding up to the TMR with positive effects on productivity of the herd, and finally for the improvement of farming income.

How it works

The VISIOMIX system is equipped with a digital camera that automatically analyzes and compares the acquired frames. The farmer defines the right degree of TMR mixing quality on a specific app, when the VISIOMIX system recognizes that the TMR quality target is achieved, the farmer receives a notification on his smartphone. In addition, acoustic and visual signals on the feed mixer advise the operator.

VISIOMIX

VISIOMIX is an innovative system based on computer vision technology that is capable of measuring the homogeneity and length of fibers in the feed mixer during TMR mixing.

TMR Mixing quality Control

The application of computer vision systems in the sector of precision farming have became widely implemented, particularly in the stage of inspection of product quality as a means of replacing manual inspections. The VISIOMIX System is the first system on the market that automatically replicates the results of the “Penn State Particle Separator” real time during TMR mixing with high accuracy.

2.2.1 Imaging technology

The application of computer vision systems in the sector of precision farming have became widely implemented, particularly in the stage of inspection of product quality as a means of replacing manual inspections. The VISIOMIX System is the first system on the market that automatically replicates the results of the “Penn State Particle Separator” real time during TMR mixing with high accuracy.
3. Data Management

3.1 Feeding Management Software
3.2 NIR Analysis Management
3.1 Feeding Management Software

**DTM™ DAILY TMR Manager**
*A step ahead in Feed Management*

The DTM is a professional feeding management software that drives your precision feeding system. The comprehensive program helps farmers monitor and control feed costs, inventory, ration adjustments and other critical on-farm processes like feeder performance.

- Develops and executes target Dry Matter and nutrient values based on the feeding ratio defined by your nutritionist
- Produces detailed daily/weekly/monthly/quarterly reports on ingredient quantity, costs, nutrients, labor time and more
- DTM Software will interface with other herd management programs
- It’s Wireless! – transfers ration data from the computer to the weight indicator mounted on the tractor/TMR mixer set up
- Better productivity, less waste, better herd health, quick economic benefits

**Access your ration data from anywhere with the DTM™ Cloud**

- All farm records are accessible by computer, tablet or smart phone from anywhere with an internet connection
- Allows nutritionist to make suggestions or adjustments to the feeding ratio without needing to be on the farm.

DTM helps farm owners, managers and operators find what matters in the vast amount of data produced by today’s farms and taking decision quickly.

**How do we make busy farm managers and operators aware that using DTM feed management software is fundamental for their daily sustainability?**

Managing farms the old fashioned way using paper and spreadsheets is a waste of time, money and sanity. The results are not always accurate.

With DTM – Daily TMR Manager farmers can automatically generate reports and graphs, plan and manage feeding programs, inventory, and operators’ activity.

Everyone within the farm is guaranteed to do the right work at the right time always following the best dairy farming practices.
Main Features & Benefits

Cloud Based Software
You can use DTM in the cloud if you like. Data available where you need it, when you need it. No hardware, no administration, low implementation costs.

Premise Based, Local Installation
A locally installed solution can be provided to ensure maximum reliability in locations where the internet can be unreliable.

Training & Support
Managed training services from experienced team delivers rapid deployment. 24/7 Remote support options available. Dedicated support services for all DTM customers.

Your Own Tailored Tool
We can tailor the DTM to match your businesses requirements (i.e. Interface with main herd management software to import milk data, online access for your trusted nutritionist to specific reports etc...) No two farms have the same goals and operating processes. We understand this, and have a team of talented young engineers to deliver an outstanding solution with 100% fit.

DTM Fulfils your needs

- Stock management for efficient inventory control
  - Avoiding Stockouts
  - Tracking ingredients consumption
  - Multi site warehouse management
  - Re-ordering alerts

- Feeding management for a balanced daily nutrition
  - Daily ration program and distribution management
  - Increased production and animal health through consistent rations
  - Manage ingredients, pen and ration changes
  - Track each and every feeding process and monitor performance achieved

- Operator management for effective process control
  - Manage tasks for each employee
  - Monitor operators during loading and distribution
  - Improve communication between farming teams

- Farm traceability management for safety and quality assurance
  - Complete traceability of production process
  - Batch destination for groups of animals
  - Batch destination for single animal
  - Origin and characteristics of all forage batches purchased

- More milk with less feed
- More profit for farmers
- High quality and safe products for consumers

The DTM software in Cloud can be viewed on the phone, tablet or desktop computer to keep farm managers up-to-date on the farm and in the office. The farm manager can also monitor IOFC and operator work in real time thanks to key performance indicators and determine the most profitable dairy farming practices.

NIR Analysis Management

NIR EVOLUTION is a cloud software provided with the purchase of each and every NIR analyzer manufactured by Dinamica Generale. The use of NIR EVOLUTION enables:

- initial verification of your NIR device.
- keeping your analyzer always up-to-date (update of calibrations and firmware).
- alignment between NIR analyzer and test lab to always perform accurate analysis.

Managing your NIR device with the NIR Evolution cloud software makes your work more efficient and sustainable.

- **Quick and safe access to new calibration update**
  NIR Evolution ensures that your instruments is using the latest calibration updates. This means better prediction accuracy and greater effectiveness from your time on-farm.

- **Reliable predictions**
  NIR Evolution enables you to improve prediction performance of your NIR device. This constant monitoring and prediction improvement increases the performance of your daily analysis.

- **Save time and money**
  By gaining control over sampling and predictions, feeding analysis becomes more efficient. This means no more time-consuming for lab analysis, no more lost documents.

Stop carrying your notebook to the scale and still get the weight information you need for performance assessments and management decisions.

Taurus Trace tracks weights at different life stages, such as calf, heifer, dry cow, lactating cow etc...providing average gain, even for beef farms! Having all your animal’s weight events in a single software gives you the information needed to adjust feeding and other management strategies to ensure optimal body condition scores, and know which animals are reaching their goal weights – and which are lagging behind.

### Taurus Trace Features

- **Weight history**
- **Monitor livestock health**
- **Quick, easy and accurate weight monitoring thanks to EID/VID management**
- **Full data collection and traceability**

---

### Model Comparison

#### Taurus 50

**Description**: Advanced weighing system for all kind of animals that enables data traceability, ID-code management and control for cages automation.

**Benefits**:
- Monitor livestock health
- Evaluate breeding performance for genetic selection
- Quick, easy and accurate weight monitoring thanks to EID/VID management
- Full data collection and traceability

---

#### Taurus 70

**Description**: The most advanced weighing system for producers looking to increase farm effectiveness and profits.

**Benefits**:
- Optimized working time and less stress for animal thanks to Walk-Through Weighing System (Dynamic Mode)
- Monitor livestock health
- Evaluate breeding performance for genetic selection
- Quick, easy and accurate weight monitoring thanks to EID/VID management
- Full data collection and traceability

For the Proactive Dairy Producer

With the precision feeding system mounted on the self-propelled feed mixer we recorded an average gain of 3.8 € cents per kg of milk produced.

Before purchasing the system, silage analyses were carried out at the opening of a new bunker. Nowadays analyses are performed in real time at each silage load with remarkable precision gain.

After rainy events, we don’t have to guess how to adjust the ration. The system does it and keeps the ration consistent. One of the most notable benefits of the precision FEEDING system by Dinamica Generale is its ability to help maintain stable refusals. We consistently see between 2-5% refusals depending on the pens we are feeding.”

Alessio Luppi is the Farm Manager of the Azienda Agricola Luppi, a 280-cow dairy farm located in Italy.

An Aid to the Nutritionalist

“I’m an independent nutritionist and feed advisor since 18 years; I regularly use X-NIR portable NIR Analyzer out in the field to instantly analyse forage and give the farmers decision-making capability straight away.

With DTM – Daily TMR Manager Software in Cloud I remotely log on to see exactly what is happening at the farm without having to be there. I’m able to keep an eye on what is going on in the bunkers and make changes as they are needed. It allows me to keep track of the amount of dry matter intake per pound of milk produced. With feed costs where they are now it is an important now as ever to get the most out of every pound of feed.”

Nick Ridge is an independent Dairy & Beef Nutritionist in the UK.

Efficiency and productivity are decisive success factors for dairy farmers

Says Chris Peck of Marks Farms:

“Precision feeding assists us in making consistent rations – it takes the variability out and our milk production has increased”

“Adjusting DM on a real-time basis has resulted in using less forage while maintaining the target nutrient ratios, helping lower feed cost”

Rumen efficiency is improved, manure is more consistent and herd health is good”

“Refusals are easier to manage and we keep refusals in a 1-3% range”

On Marks Farms, the precision FEEDING System had less than a three month payback.

At Marks Farms, a 4,200-cow dairy near Lowville, New York, the precision FEEDING system from Dinamica Generale was utilized to determine its variability in adjusting forages for Dry Matter (DM) consistency on the fly.
